STEP-BY-STEP INSTALLATION – Wall Cabinets

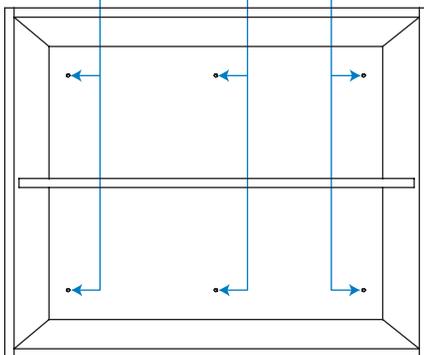

NOTE:

Installation of Base Cabinets and Countertops/ Backsplashes is to be done first, which provides a surface for support of Wall Cabinets during their installation.

WALL CABINET INSTALLATION:

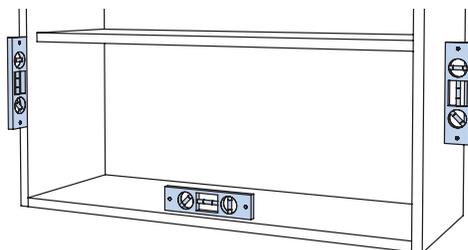

- 1 Note that there is a minimum of six (6) standard locations for attachment of Wall cabinet to building structure, as illustrated below. Anchoring devices (*not provided*) must pass through back of cabinet.

6 standard attachment locations:
3" down from top of cabinet
3" up from bottom of cabinet
2" in from end panels & mid-width of cabinet

- 2 Locate first Wall cabinet, aligning outermost edge with outermost edge of Base cabinet directly below.

- 3 Use a level on sidewall, front edge and cabinet floor to plumb Wall cabinet to wall.

- 4 Securely attach cabinet to building structure through cabinet back, in locations illustrated in Step #1.

Fastening anchors (not provided) to be of type suitable for wall structures such as block and concrete, wood stud walls and metal stud walls. Do not attach only to drywall or thin paneling.

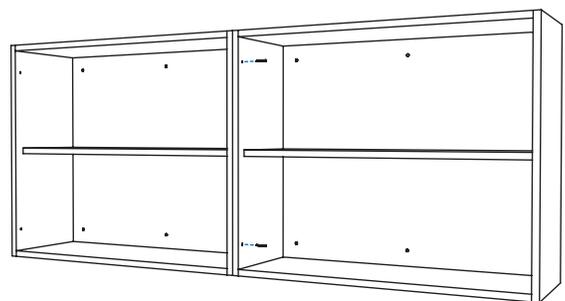

CAUTION!

Never rely on simply anchoring into gypsum, plaster or thin paneling wall. Always fasten into hard areas of masonry walls, studs and internal wall blocking.

IMPORTANT!

Cabinets must be securely attached to building structure with anchoring devices of appropriate type, size and quantity in accordance with applicable codes and accepted installation practices.

- 5 If there are multiple Wall cabinets, continue to mount cabinets side-by-side, using previous installation steps. Align cabinet bottoms and front vertical edges for a professional appearance. Attach cabinet sides together, using 1 1/4" screws (*provided*), as may be necessary.

This completes the installation.
